

ONLINE SEMINAR
EV FLEET CONVERSIONS FOR NET ZERO
DATE & TIME: 21 January 2025: 18:00 – 19:00 GULF STANDARD TIME

ABOUT THE EVENT

Transport's path to a net-zero future doesn't just hinge on shiny new electric vehicles—existing fleet conversions can also play a pivotal role. FUSE EV converts internal combustion engine vehicles to electric vehicles. This seminar will demystify the electrifying of your current fleet, showing how to transform diesel-hungry workhorses into zero-emission champions without having to start from scratch.

This session will highlight how fleet electrification can help organizations meet ambitious sustainability targets, all while delivering operational efficiencies and long-term cost savings. Real-world examples and accessible insights will replace complexity and jargon, ensuring participants gain a clear understanding of the practical steps, technologies, and strategies for converting conventional fleets into clean, quiet EVs.

ABOUT THE SPEAKER

Salman Hussain, Co-Founder of FUSE EV Conversions, is a passionate innovator and respected figure in sustainable transport solutions. With a career focused on bridging advanced EV conversion technologies and the practical demands of fleet operators, Salman has a proven track record in guiding organizations through the electrification process. His expertise isn't confined to spreadsheets or engineering labs; he's worked hands-on with diverse clients—public agencies, logistics companies, and

corporate fleets—to help them achieve their climate targets and improve their bottom lines.

FURTHER INFORMATION AND REGISTRATION

THIS IS AN ONLINE EVENT. Attendance at this Seminar is free, but registration is mandatory. Sign-up here at [EV Conversions](#). Registered attendees will be sent joining details shortly before the event.
